

Paulo Llanes

[linkedin.com/in/paulollanes](https://www.linkedin.com/in/paulollanes)

Staff Software Engineer with over 10 years of professional industry experience. I have worked on a large breadth of fields and sub-disciplines within Software Engineering, such as Systems Infrastructure, Applications/Backend, Distributed Systems, Big Data, AI Infrastructure, Privacy and Compliance, among others. Give me enough resources and I'll build anything at planet-scale.

Professional Experience

LinkedIn (Oct 2017 – Present)

Staff Software Engineer

- Led multiple cross-team/cross-disciplinary **Data Privacy** involving Engineering, PMs, and Legal, including the effort to make 100% (up from 0%) of all outbound Third-Party HTTP Calls to be **auditable for compliance** with certain GDPR, CCPA, and DMA requirements.
- Led the effort to build and maintain the singular **platform** used at LinkedIn for **consuming incoming Webhooks** from Third Parties.
- Led the effort to **build AI Infrastructure** that allows for AI Projects to incorporate **crowdsourced Humans-in-the-Loop**
- Participated in **cross-team workgroups** with other Staff and Senior Staff Engineers to **standardize on engineering practices** to improve Engineering Craftsmanship at LinkedIn
- Regularly led office hours to **find potential points of Leverage** between partner teams and my team, when working with third-parties, especially when related to privacy and compliance, or authorization (e.g. OAuth2).

Microsoft (Feb 2013 – Oct 2017)

Software Engineer II

- **Worked on core Windows 10 features** such as Delivery Optimization, Windows Update, and the Windows Store, with focus on delivering a good download experience.
- **Built Data Pipelines** including data emission, ingestion, storage, aggregation, and reporting. Individual pipelines processed multiple TBs of tabular data per day, giving us visibility to our Windows 10 features at planet-scale.
- Designed and built **automated end-to-end testing and deployment infrastructure** that can simulate peer-to-peer downloads in numerous conditions, including randomized conditions (chaos engineering).

Motorola Mobility (Intern May 2011 – Aug 2011; Full-time July 2012 – Feb 2013)

Test Engineer

- Designed and developed a new **no-code tool** that allowed the creation, modification, distribution, and usage of "test recipes" during phone manufacturing
- Worked with partner teams to help them **leverage** our new no-code tool and provided **end-to-end support** for production lines that have onboarded to our tool.

Education and Skills

University of Illinois at Urbana-Champaign

- Degree: Bachelor of Science in Computer Science

Software Engineering

- Experienced with Technical Leadership and Software Architecture
- Experienced with Java, C#, C++, C, and dabbling in Python and JavaScript
- Experienced with Query Languages, like SQL and Azure KQL
- Experienced with creating observability dashboards in Grafana and similar platforms
- Experienced with designing distributed and parallelized systems, using custom or off-the-shelf components like Kafka
